

Pen Dataset

- The data set is a subset of the pen-based recognition of handwritten digits data set available from the UCI repository (Blake et al. 1998).
- The data set includes only two of several measures taken of the position of the pen, that is, X1 and X10.
- The cases are digits written on a pressure-sensitive tablet.
- The target is the true digit written, in this simplified example, the digit 1, 7, or 9.
